Group Code:	
Date of Scoring:	
Lesson Plan Type:	☐ Pretest ☐ Posttest

Section A: SMA Lesson Plan Evaluation Rubric (Sun et al., 2023)

This section assesses the instructional design quality of SMA lesson plans across three domains: learning objectives, learning content, and learning activities. The evaluation focuses on the clarity and alignment of objectives, the accuracy and relevance of SMA content, and the extent to which learning activities promote engagement, flexibility, inquiry, collaboration, and real-world application. Each of the nine criteria is rated on a three-point scale: 0 = Does not meet the standard, 1 = Partially meets the standard, and 2 = Fully meets the standard. The maximum possible score for this section is 18 points.

Category	Criteria	Description / Evaluation Focus	Score
Learning Objectives	Clear and diversified	Objectives are specific, measurable, and aligned with students' learning levels.	□ 0 = No clear objectives provided □ 1 = Objectives stated but vague OR not measurable OR limited alignment □ 2 = Objectives are clear, measurable, diverse, and well aligned with learners' level
	Aligned with students' learning situations	Objectives: consider prior knowledge, readiness, and contextual learning needs.	□ 0 = No consideration of learners' prior knowledge or context □ 1 = Partial consideration (either prior knowledge OR context, not both) □ 2 = Fully considers prior knowledge, readiness, and learning context
	Reflect the core literacy of SMA	Objectives: integrate critical thinking, digital citizenship, and algorithmic understanding.	□ 0 = No integration of SMA literacy elements □ 1 = Partial integration (mentions but not fully embedded) □ 2 = Strong integration of critical thinking, digital citizenship, and algorithmic understanding
Learning Content	Accurately and specifically described	Content is relevant, coherent, and reflects correct SMA concepts.	□ 0 = Content inaccurate or missing □ 1 = Somewhat accurate but incomplete or unclear □ 2 = Accurate, specific, and well-structured SMA content

	Embodies SMA and AI knowledge	Lesson connects algorithmic principles to real-world examples in social media.	□ 0 = No connection to SMA/AI concepts □ 1 = Weak or superficial connection □ 2 = Strong and explicit integration of algorithmic/social media AI concepts
	Relates to real-life contexts	Examples and applications are practical and meaningful to students' daily experiences.	□ 0 = No real-life connection □ 1 = Limited or generic examples. □ 2 = Strong, meaningful, real-world applications.
Learning Activities	Open and flexible	Activities encourage inquiry, creativity, and exploration of SMA-related problems.	□ 0 = Rigid, teacher-centred activities only □ 1 = Some flexibility or inquiry but limited creativity. □ 2 = Highly open, encourages exploration and creativity.
	Consistent with learning objectives	Activities logically build upon objectives and expected outcomes.	□ 0 = Activities not aligned with objectives □ 1 = Partial alignment □ 2 = Fully aligned and logically structured toward objectives.
	Reflect on project-based learning	Includes collaborative or problem-solving elements related to real SMA scenarios.	□ 0 = No collaboration or problem-solving. □ 1 = Some group work but not fully project-based. □ 2 = Strong PBL elements (collaboration, problem-solving, real SMA scenarios)

Section B: SMA Lesson Plan Evaluation Rubric (Spooner et al., 2007)

This section evaluates the inclusivity and accessibility of SMA lesson plans in relation to Universal Design for Learning (UDL) principles. Each UDL dimension is rated on a 0-2 scale based on evidence of inclusive practice.

UDL Principle	Level	Descriptor	Score
Representation	0	No or minimal evidence of multiple representations; relies on a single mode (e.g., lecture or text).	☐ 0
	1	Some evidence of varied representations (e.g., visuals, discussion) but lacks systematic planning for diversity.	☐ 1

	2	Strong, intentional use of multiple representations (visuals, videos, summaries, examples) addressing diverse needs.	☐ 2
Action & Expression	0	Students can only respond in one way (e.g., writing).	☐ 0
	1	Some options are provided (e.g., oral or written), but not fully aligned with student needs.	☐ 1
	2	Multiple, flexible options (digital tools, projects, presentations) are clearly linked to learning goals.	☐ 2
Engagement	0	Activities are teacher-directed with limited student choice or relevance.	☐ 0
	1	The lesson includes some engaging elements (discussion, examples), but not consistently inclusive.	☐ 1
	2	Lesson integrates multiple engagement strategies (choice, collaboration, real-world connections).	☐ 2

Overall Evaluation Summary

Dimension	Maximum Score	Obtained Score	Evaluator Comments / Feedback
SMA Lesson Design Quality (Sun et al., 2022)	18		
Lesson Inclusivity (Spooner et al., 2007)	6		
Total Score	24		

Evaluator's Overall Feedback

Please summarise the strengths, areas for improvement, and recommendations for enhancing both instructional quality and inclusivity in the teacher's SMA lesson plan.
